## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election without traverse of species I in Paper No. 9 is acknowledged.

### ***Drawings***

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, *mounting supports* must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:  

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
2. Claims 6, 8 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 6, it is not clear what "a delta-folding mode" encompasses. It is not clear what is the structure or the function that the delta-folding mode is representing.

In claim 8, it is not clear what "the perforating strips are mounted on further perforating bars" encompass. Neither the specification nor drawings provide evidence that perforating strips are mounted on perforating bars. Claim 8 looks more like another embodiment different of the species elected.

In claim 9, it is not clear what "mounting supports" encompass.

In claim 15, it is not clear what "a stationary perforating cylinder" encompasses. Neither the specification nor drawings provide evidence of a stationary perforating cylinder. Claim 15 looks more like another embodiment different of the species elected.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. As best understood, claims 1-7, 9-16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Behmel et al. (foreign patent no. DE 4327466 A1).

Behmel discloses (Fig. 1-21) the invention including perforating cylinders 5-6, perforating tools 16, perforating strips 18, perforating bars 19, a cylinder shaft 58, 80, mounting supports 91-92, transmission elements (see Fig. 4, 10, 12, 16, 20), coulisse or slotted guide (see Fig. 20), transmission point/toothings 38-46, 54-55 and a compensating device.

**Conclusion**

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Harless, Castle, Eiting et al., Hayashi et al., Bragaglia, Strouse, Takahori et al., Nitsuma et al. and Yokoro et al. are cited to show related device.
